

I am writing about Central Banking's training course: **Climate Change: Managing Financial Risks and Green Finance Initiatives** which will be taking place online from the 7 – 10 March, 2022.

In 2022, it is no longer a question of whether central banks should address climate change, but rather how and when.

For central banks, a key question is how to implement climate change at a strategic level when it affects the whole central bank, yet in a variety of specialised and localised ways. As market players central banks buy and sell assets which have ESG ratings; as supervisors they assess and address the financial risks from climate change; and lastly as institutions they have a carbon footprint.

Yet, questions remain around how to incorporate climate change into existing mandates, objectives, policies and strategic plans.

This course is designed to equip central bankers to meet these challenges.

Each day will feature three hours of expert-led Live Content to maximise the opportunity to share and learn. I will ensure participants have opportunities to network throughout the course, with time set aside for a workshop on implementing key learnings.

Expert speakers will be joining me to cover topics such as:

- Integrating climate change and green finance into central bank mandates
- Greening central banks' internal operations
- Implementing a sustainability mandate into a reserve management framework
- Climate stress testing and modelling
- Green taxonomies and disclosure requirements

To join the course, please register online or get in touch with the Central Banking Training team for guidance on the registration process, including help with your internal approval: +44 20 7316 9136 / training@centralbanking.com

I look forward to welcoming you and your colleagues to the course this March.

Best regards,

Morten Kjærgaard

Independent consultant and former head of reserve management, National Bank of Denmark
